## Adjacency-list graph representation: Java implementation

```
public class Graph
private final int V;
                                                      adjacency lists
private Bag<Integer>[] adj;
                                                      (using Bag data type)
public Graph(int V)
   this.V = V;
                                                      create empty graph
    adj = (Bag<Integer>[]) new Bag[V];
                                                      with V vertices
    for (int v = 0; v < V; v++)
       adj[v] = new Bag<Integer>();
}
public void addEdge(int v, int w)
                                                      add edge v-w
   adj[v].add(w);
                                                      (parallel edges and
                                                      self-loops allowed)
    adj[w].add(v);
                                                      iterator for vertices adjacent to v
public Iterable<Integer> adj(int v)
{ return adj[v]; }
```
